OUR ORIGIN

Codebasics' Story

A journey born from purpose, healing, and a shared commitment to authentic education.

In 2016, Dhaval Patel created the **'Codebasics' YouTube channel** to share his knowledge as a means to gain mental peace during a significant health struggle. He discovered his passion for teaching and realized his unique ability to simplify complex topics. The love and blessings from thousands of students started to heal his health issues. This transformative experience soon became his life's purpose and even led him to consider leaving his lucrative job at Bloomberg, New York.

In 2020, one of Dhaval's subscribers, Hemanand Vadivel, a data analytics expert working in Europe, wished to contribute to the Codebasics community as a 'payback' for what he learned from the channel. In 2021, Hemanand began creating impactful videos for Codebasics, and it helped him heal from the trauma of losing family members to Covid-19. Seeing their shared values, Dhaval proposed a collaboration: creating the best, most affordable Power BI course on the planet.

After six months of dedicated collaboration, they released the Power BI course in June 2022, which was met with overwhelming positivity. By this time, both Dhaval and Hemanand had already **left their high-paying jobs** to create 'Codebasics' as a full-time learning tech company. They made this decision after discovering their *Ikigai*, their true purpose, to make a meaningful impact through education, without any gimmicks.

In the era of commoditized education, where millions of courses are offered for profit but lack true value, Dhaval and Hemanand prioritized providing **authentic, job-relevant learning experiences** with honest pricing. Besides job-related affordable courses, Codebasics offers high-quality free content and conducts several initiatives to support aspirants, including mothers returning to work. This embodies their core vision of providing authentic job-related learning experiences to everyone, irrespective of their financial condition.

THE CHALLENGE

Software Engineers Need AI Skills - Fast.

The world of AI is changing rapidly. Software engineers are under pressure to integrate AI features into their existing stacks, but self-paced videos don't cut it for busy working professionals. We surveyed 134+ engineers; the demand for live, hands-on, industry-relevant AI training is overwhelming. This bootcamp is the answer.

PROGRAM FORMAT

Eleven Weeks. Twenty-Two Sessions. Maximum Impact.

11
WEEKS
Fast-paced, intensive learning sprint

22
SESSIONS
Sat & Sun, 4–7 PM IST

3
HRS / SESSION
2hrs learning + 30min break + 30min doubt clearing

WHO IS THIS FOR

Built for Professionals Who Ship Code.

Software Engineers (2+ Years)
You already know programming, design thinking, and system design. We leverage your existing knowledge to fast-track your understanding of Python and AI concepts.

Engineers Integrating AI
Need to add AI features to your current software stack? Learn to build RAG systems, agents, and AI-first apps that ship to production.

Full-Time AI Career Seekers
Want to transition into a dedicated AI Engineering role? Get the projects, portfolio, and skills to make the leap.

Busy Working Professionals
No time for self-paced videos? Live evening sessions designed around your work schedule with real-time doubt clearing.

CURRICULUM AT A GLANCE

A Journey From Foundations to Mastery.

WEEK 1

DAY 1
Kickoff: Welcome to AI Engineering 2.0

- → Welcome & team introductions
- → Cohort roadmap & learning flow
- → Dev setup: GitHub, Colab, Claude
- → AI Engineering 2026 market trends

DAY 2
AI Landscape, Python & AI Stack

- → AI landscape
- → Python fundamentals & OOP
- → REST APIs, FastAPI & LLM Integration
- → Layers of AI Engineering stack

WEEK 2

DAY 3
LLMs, Embeddings & VectorDBs

- → Large Language Models: attention, tokens & context windows
- → Embeddings & semantic similarity
- → Vector databases with Qdrant
- → Model economics & selection

DAY 4
RAG, LangChain & Evals Intro

- → RAG pipeline & ingestion flow
- → LangChain + LCEL basics
- → Hybrid search: Vector + BM25
- → RAGAS & evaluation metrics

WEEK 3

DAY 5
Agentic AI Foundation

- → ReAct agent from scratch
- → Tool calling & reasoning loop
- → Memory systems for agents
- → Reliability caveats in production

DAY 6
Agent Orchestration & LangGraph

- → Workflow state machines
- → Conditional branches & loops
- → Routing, guardrails & compliance (HIPAA, GDPR)
- → Trajectory evaluations

WEEK 4

DAY 7
LangSmith & AWS Deployment

- → Traces, runs & structured feedback
- → Eval datasets & monitoring
- → Debug deployed AI systems
- → Deploy apps to AWS

DAY 8
Evals & Guardrails in Production

- → Offline / online eval systems
- → Human-in-the-loop review
- → Acute risk vs chronic drift
- → Beyond RAG agent evals

WEEK 5

DAY 9
MCP

- → MCP fundamentals
- → Build MCP servers in Python
- → Connect tools, APIs & data
- → AI interoperability standards

DAY 10
Context Engineering

- → Four pillars mastery
- → Context compression methods
- → Sliding window management
- → Prompt caching hands-on

WEEK 6

DAY 11
Multi-Agent Systems

- → Multi-agent architectures
- → Subgraphs & parallel execution
- → Circuit breakers & fallbacks
- → Workflow architecture design

DAY 12
Multimodal AI Engineering

- → Extract data from PDFs/images
- → Multimodal RAG systems
- → Image + text retrieval
- → Video understanding agents

CURRICULUM CONTINUED

Advanced Topics & Capstone.

WEEK 7

DAY 13
Personal Branding + Text-2-SQL
- → LinkedIn positioning
- → GitHub portfolio storytelling
- → Text-2-SQL architecture
- → Self-correcting SQL agents

DAY 14
SLMs & Local AI
- → Qwen, Gemma, Phi models
- → Ollama, vLLM, llama.cpp
- → Local deployment patterns
- → Build local AI API endpoint

WEEK 8

DAY 15
Deep Work + Industry Case Study
- → Protect focused time
- → Reduce context switching
- → Production AI failures & lessons
- → Architecture tradeoff analysis

DAY 16
Voice AI
- → Real-time voice stack (Deepgram STT, TTS, LiveKit)
- → Low-latency voice systems
- → Interruptions & silence handling
- → Multi-turn context recovery

WEEK 9

DAY 17
Advanced AI Engineering
- → Cost optimization at scale
- → Semantic caching systems
- → Smart model routing

DAY 18
Fine-Tuning & Synthetic Data
- → Fine-tune vs RAG decisions
- → LoRA & QLoRA training
- → Data filtering & deduplication
- → Synthetic dataset pipelines

WEEK 10

DAY 19
Reinforcement Learning + AI Product Thinking
- → GRPO behind DeepSeek-R1
- → Reward design for agents
- → Identify true AI use-cases
- → Product success metrics

DAY 20
AI Security
- → Prompt injection attacks
- → Hallucination drift risks
- → Context poisoning defense
- → Sandboxed tool execution

WEEK 11

DAY 21
Capstone Project
- → Build complete AI product
- → End-to-end system showcase
- → Production-ready architecture
- → Final polish & review

DAY 22
Interview Preparation + Capstone Project Showcase
- → Present capstone to panel
- → AI system design interviews
- → Portfolio review feedback
- → Live demo & critique

WHAT YOU BUILD

Projects That Build Your Portfolio.

Theory is useless without execution. You will build and ship real-world AI applications that demonstrate your competence to employers.

✓ **Market Cap Calculator**
Apply Python & OOP to build a financial analysis tool from scratch.

✓ **GitHub Profile Analyzer**
Consume external APIs and process data to generate insights.

✓ **Domain-Specific Q&A API**
Deploy a fast, efficient Q&A service leveraging Groq's high-speed inference.

✓ **VectorDB Recommendation System**
Implement similarity search using embeddings and Qdrant for product recommendations.

✓ **Internal Policy Chatbot**
Construct a full RAG pipeline, first in pure Python, then using LangChain.

✓ **Agentic Organizational Chatbot**
Build a production-grade agent with semantic routing, tool calling, and guardrails.

✓ **GitHub Assistant**
Design a stateful, multi-step workflow using LangGraph components.

✓ **Employee Onboarding Agent**
Integrate AI with external systems safely using the Model Context Protocol (MCP).

🏆 **The Capstone Project**
Identify an industry problem, design the architecture, select the right models, implement observability, and deploy a complete AI product. This is your flagship portfolio piece, showcased to a live panel at the end of the cohort.

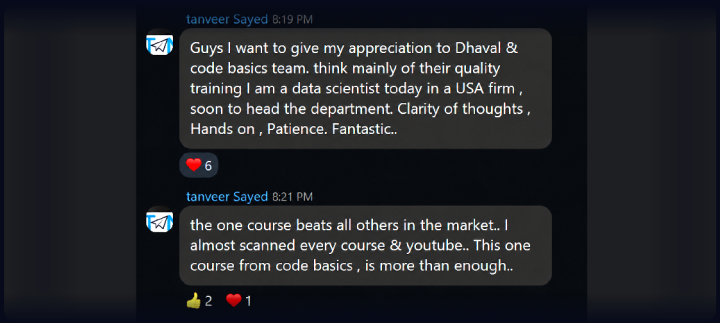

INCLUDED BONUS

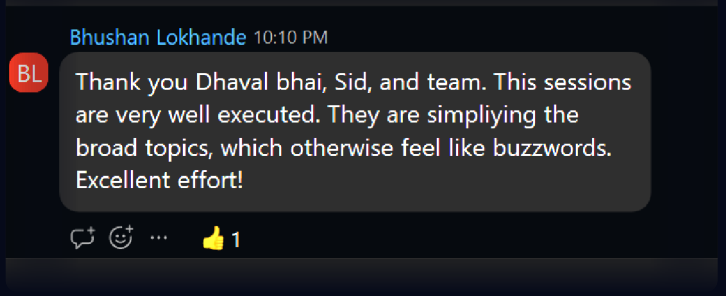

Full Gen AI Bootcamp
Entire self-paced GenAI Bootcamp included (₹15,000 value) - 6–8 months of content

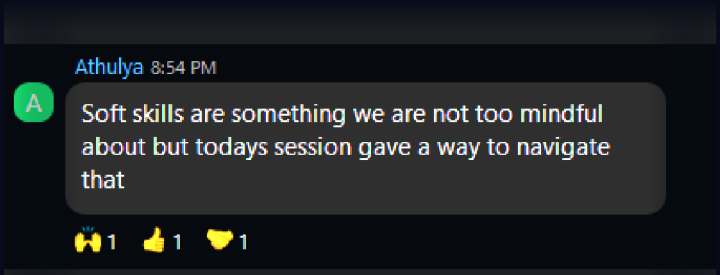

Career Toolkit
Project portfolio website, LinkedIn optimizer, interview practice platform & more

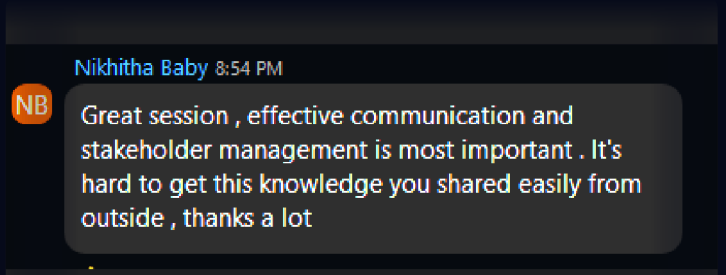

LEARNER VOICES

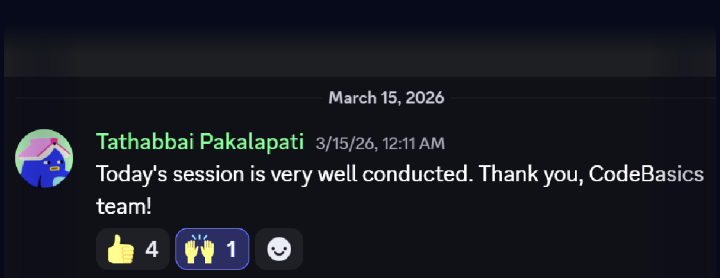

Glimpses From Inside the Cohort.

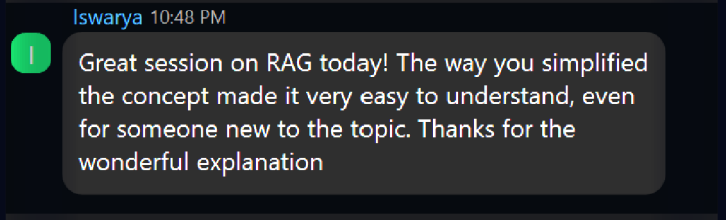

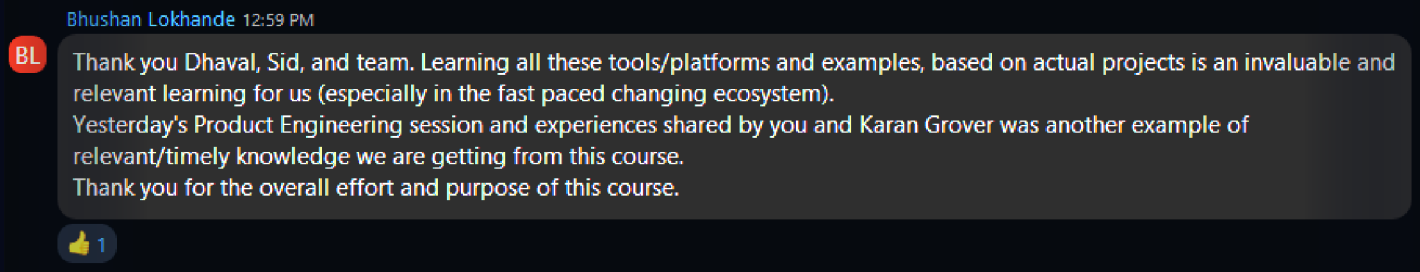

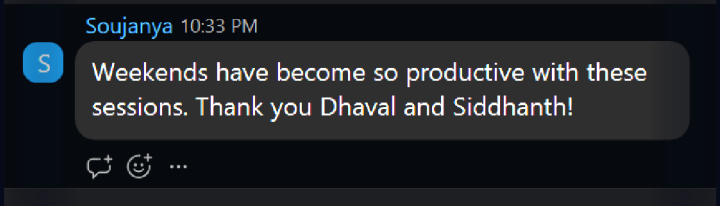

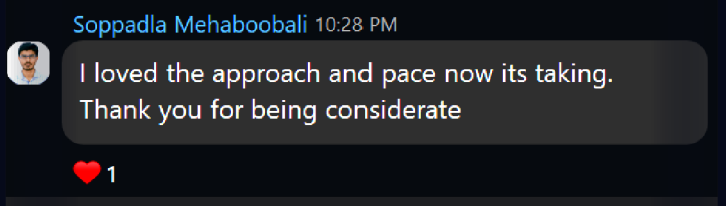

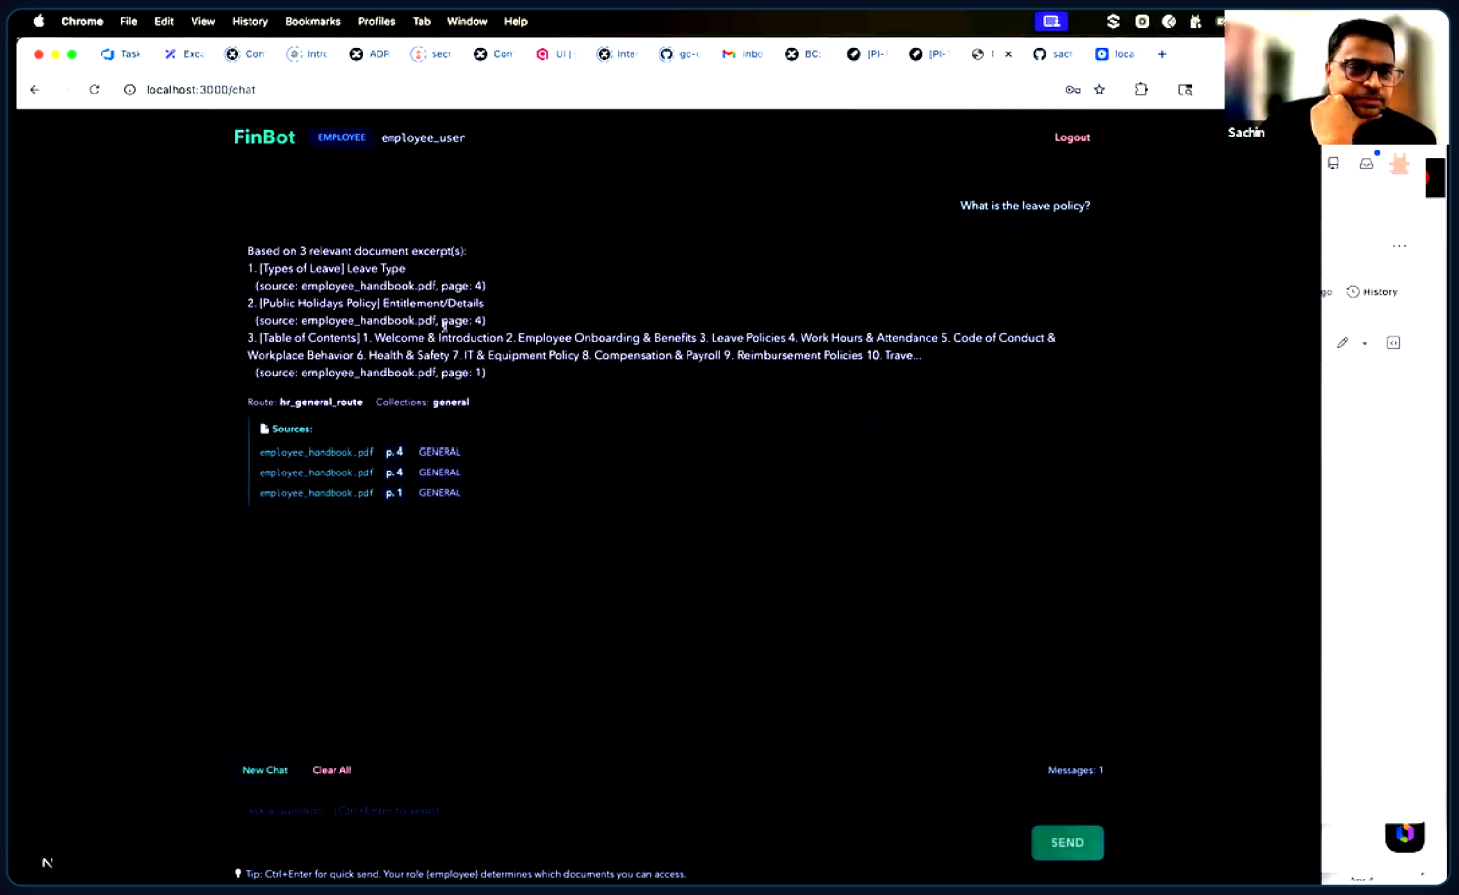

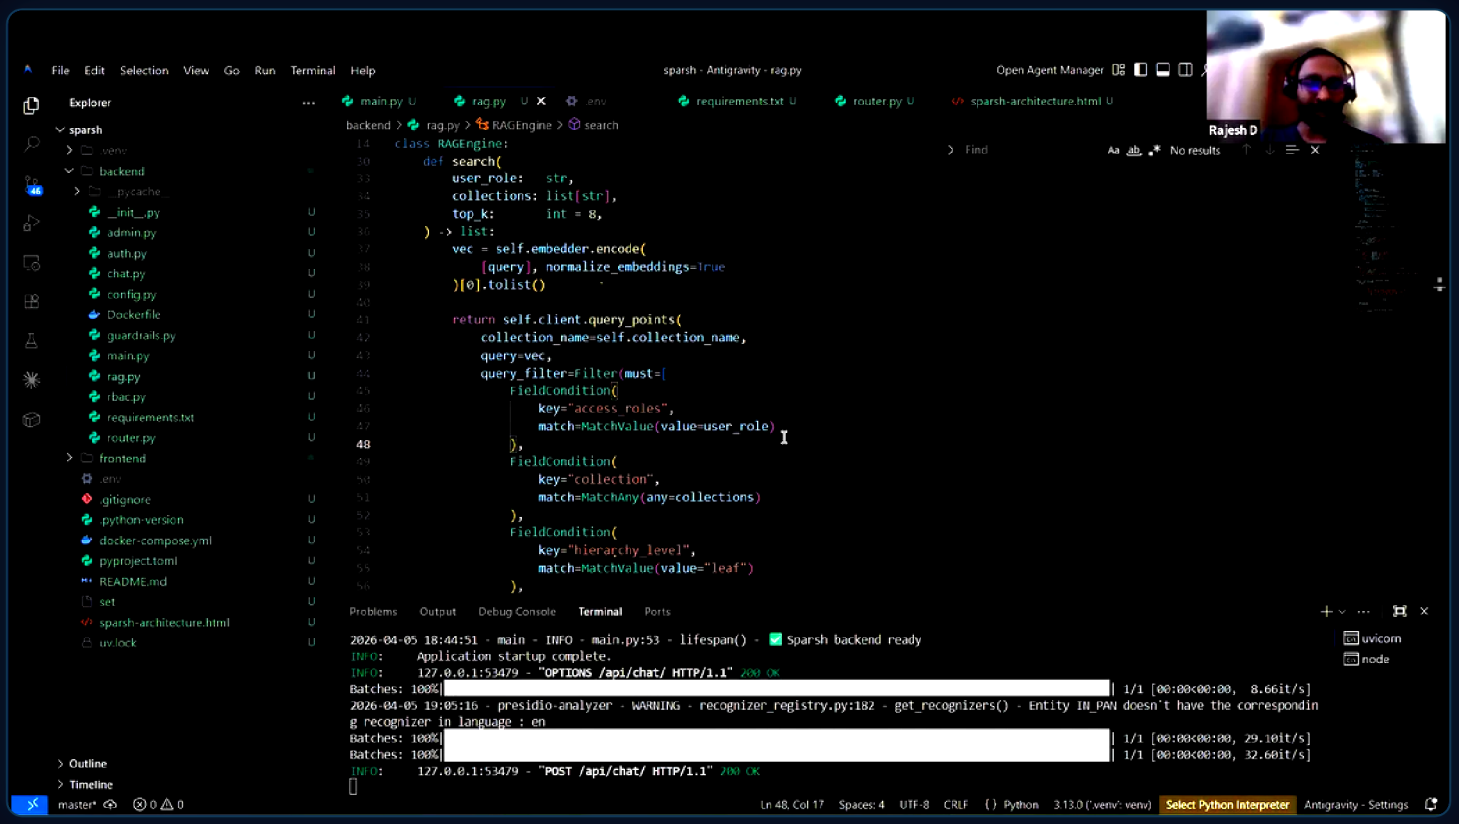

COHORT PROJECT SHOWCASES

Real Projects. Real Impact.

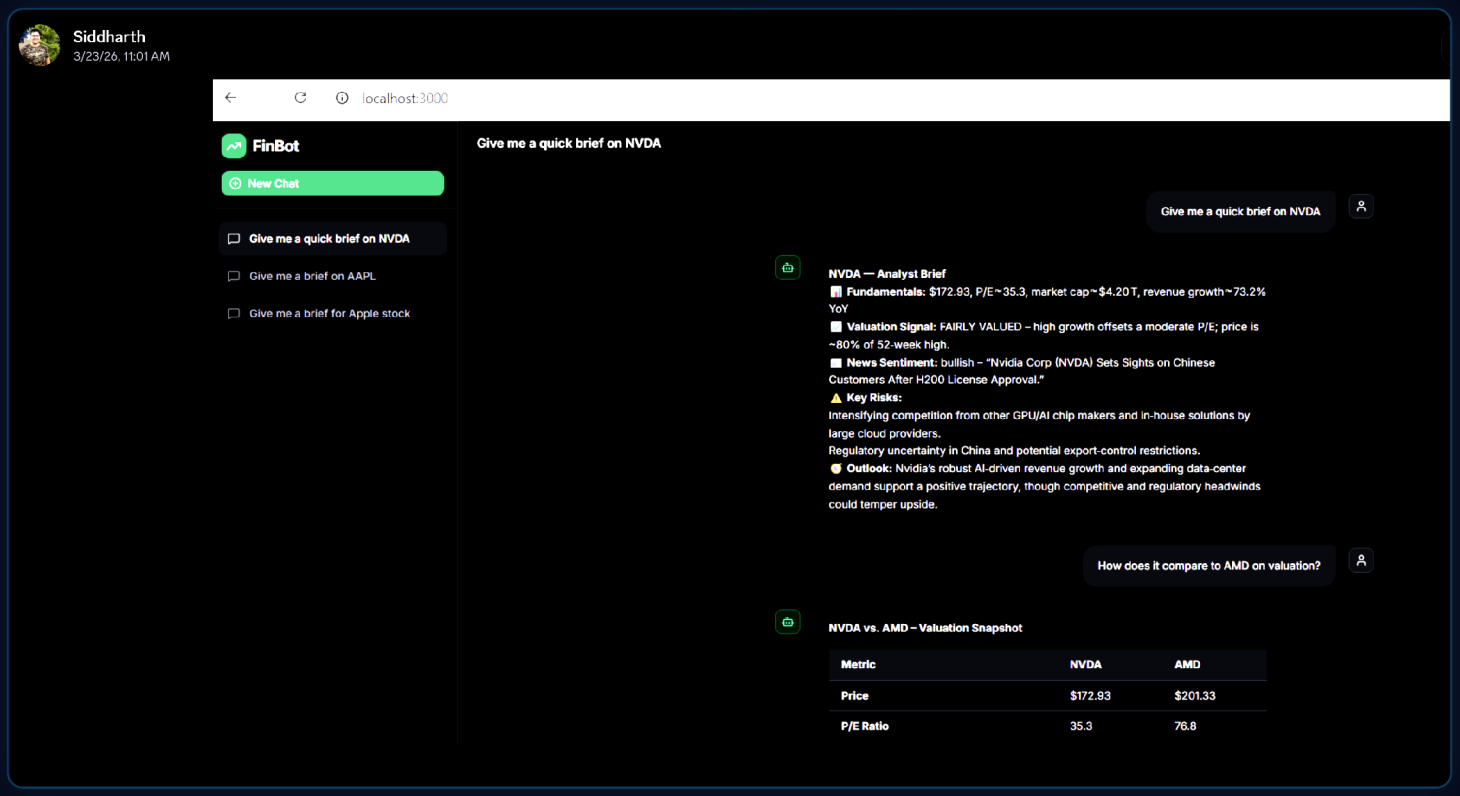

by Sachin

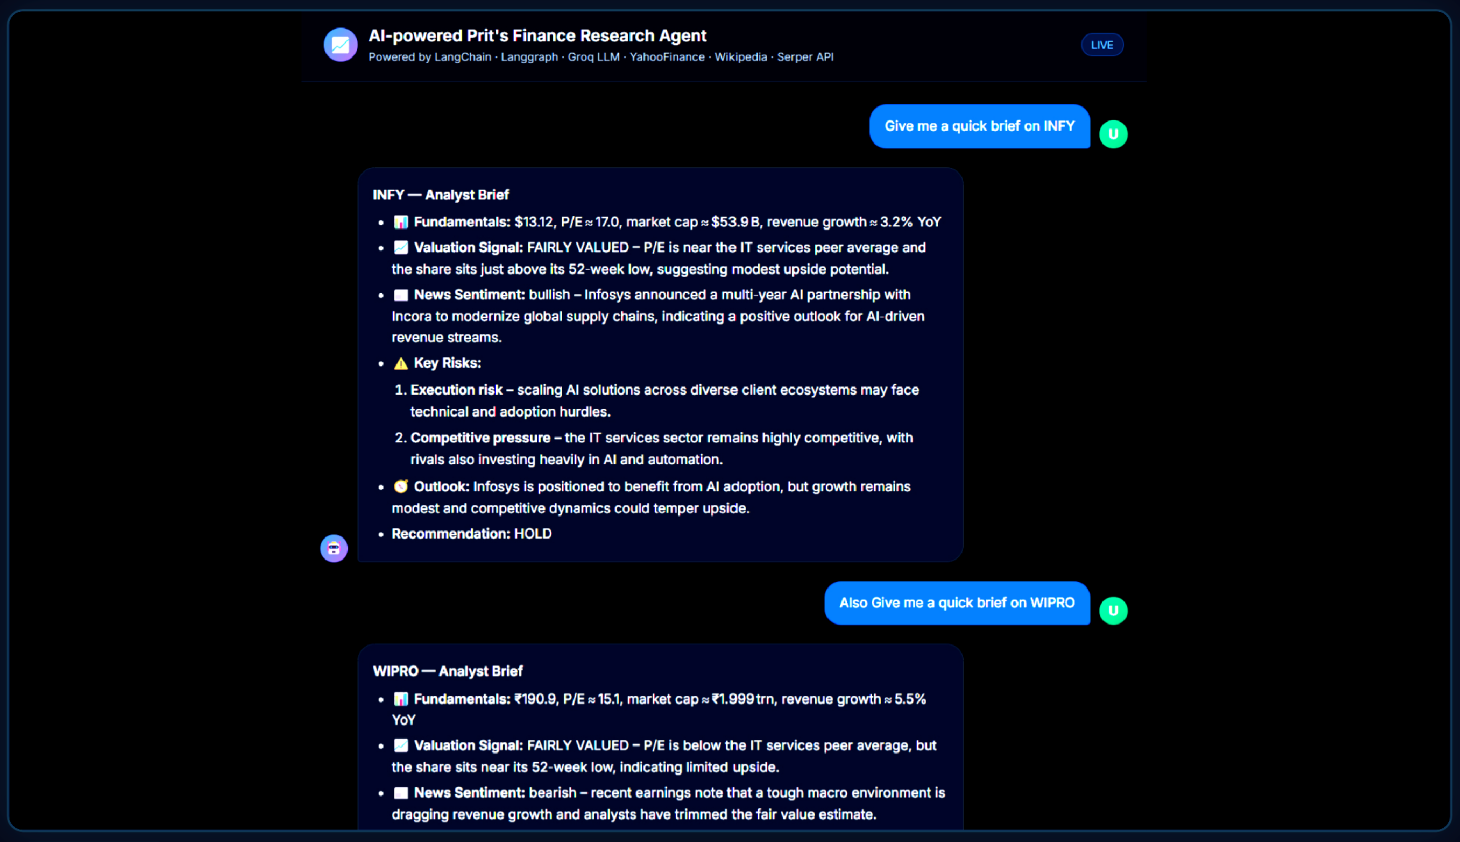

by Rajesh D

COHORT PROJECT SHOWCASES

Real Projects. Real Impact.

by Siddharth

by Prithvish

THE EXPERIENCE

One Bootcamp. Complete Transformation.

A structured 11-week live journey designed to take you from learning GenAI concepts to building production-ready AI systems with confidence.

This is not just a course.
It's an implementation-focused transformation experience.

WHAT'S INCLUDED

- ✓ 22 Live Interactive Sessions
- ✓ 6–8 Months of Self-Paced Access
- ✓ Real-World Capstone Project
- ✓ Career Acceleration Toolkit
- ✓ Private Discord Community
- ✓ 100% Refund Policy

Schedule

Days: Saturday & Sunday
Time: 4:00–7:00 PM IST
Format: 2hrs learning + 30min break + 30min doubt clearing
Duration: 11 weeks (22 sessions total)

What Makes This Different

Live interaction with real-time doubt resolution. Code along with the instructor. Curriculum evolves with AI industry changes. Practical and project-based from session one.

YOUR INSTRUCTORS

Dhaval Patel
Founder, Codebasics · Ex-NVIDIA

1 Million+ YouTube subscribers · 659K+ learners · Built AI products at NVIDIA

Teaches the core Build modules: LLM fundamentals, RAG, multi-agent systems, AI system design, and the capstone project.

Hemanand Vadivel
Co-founder, Codebasics · Ex-Edgewell

10+ years in analytics and leadership · Built and scaled teams across international markets at Edgewell

Teaches the Orchestrate and Distribute modules: productivity systems, stakeholder management, LinkedIn strategy, and personal branding.

Siddhant Pandey
AI Research Engineer, Codebasics

5+ Years of experience in AI & OpenSource · Hands-on AI Engineer building production systems daily

Leads live weekend cohorts and practice labs: hands-on coding, project walkthroughs, debugging, and real-time problem solving.

Start Building AI Products in 75 Days.

Limited to 500 Professionals.
